

Information on NiSV:

The "Ordinance on the protection against the harmful effects of non-ionizing radiation when used on humans" (NiSV - Network and Information System Security Ordinance) has been published in the Federal Law Gazette Part I No. 41 since December 5, 2018 and is therefore also effective. Implementation will start on January 1, 2021.

From this point on, certain applications may only be carried out by doctors; numerous other applications require corresponding extensive training, which must be completed by December 31, 2021.

This is causing a lot of confusion at the moment. **We are all the more pleased to be able to inform you all that our devices are not affected by this and are not subject to doctor's reservation, nor do you and your staff need any further training measures!**

- The geoway systems are no ultrasound devices, no laser devices, no intensive light sources, no low frequency devices, no direct current devices and no magnetic field devices.

Our systems do not reach the base values and / or reference values mentioned in the NiSV, or do not exceed them.

This ensures that our devices can be used without any problems and without restriction, even from January 1st, 2021.
